1- Your team does 2-week sprints. Their last four sprints had 20, 30, 40 and 50 points respectively. They have 500 points in their backlog. Estimate how many weeks are needed to finish the backlog.(20 points)

2- You are making a webpage where the user is using a form to send data to backend. Their purpose is to add a diary item to the database. In the backend, “/create” endpoint name is going to handle the incoming request.

Write the HTML form code which will send data.

Form will have a input for heading and a textarea for the diary text. You can use *heading* and *post* for names in these elements. (40 points)

3. Answer each question below with a single or two word answer. Write the answer next to the lines.(20 points)

- a) Which scrum artifact contains all planned work for the current sprint?
- b) What is the name of the meeting held every day in Scrum?
- c) Which HTTP method is commonly used to delete data?
- d) What keyword is used in SQL to sort query results?
- e) Which database command is used to add new records into a table?
- f) Which Scrum role is responsible for facilitating Agile practices?
- g) Which HTML tag is used to create a hyperlink?
- h) Which HTTP status code usually means Not Found?
- i) What is the name of the database operation that modifies existing data?
- j) What keyword is used in Python to define a function?

4. Fill in the blanks in the code below. (20 points)

```
def add_entry():
    if "_____" not in session:
        return "not logged in"

    user_title = request.form["title"]
    user_content = request.form["content"]
    conn = get_db_connection()
    cur = conn.cursor()
    cur.execute("insert into diaries(username, title, content) values(?,?,?)",
               (_____, _____, _____))
    conn._____( )
    return "added successfully"
```
